PROFESSIONAL SUMMARY

Software Development Engineer with 1.5+ years building and operating cloud data infrastructure: AWS pipelines (S3, Lambda, Airflow) writing into PostgreSQL, containerized services (Docker, Kubernetes), and CI/CD workflows (Git, Jenkins, GitHub Actions) across IoT, media, and fintech production systems. Works daily in Linux, scripts in Python and Bash, and troubleshoots data/pipeline issues under lean-resource constraints. Quantitative foundation from a B.Tech in Robotics & Artificial Intelligence, reinforced by competitive-programming results (Meta HackerCup, Codeforces).

TECHNICAL SKILLS

Database & Data Storage: PostgreSQL, SQL, RDBMS, Database Systems, Data Pipeline Design, Schema & Storage Optimization, Vector Databases

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SageMaker), GCP (BigQuery), Docker, Kubernetes, Linux, Containerized Environments, API Design

Automation & Scripting: Bash, Python, Git, GitHub Actions, Jenkins, Apache Airflow, Infrastructure Automation Scripts

Programming Languages: Python, SQL, Go, C++, Bash

Monitoring & Reliability: Production Monitoring, System Health Checks, Root-Cause Troubleshooting, Data Quality & Pipeline Validation

Data & ML Infra Exposure: Feature Engineering, Model Deployment, RAG & Vector Store Design, LLM Tooling

PROFESSIONAL EXPERIENCE

Software Development Engineer I

Apinya Mechatronics Industries Pvt. Ltd, Faridabad, India | July 2026 – Present

- Architected AWS data pipelines (S3, Lambda, Airflow) writing into PostgreSQL, standardizing storage of multi-sensor time-series data (vibration, temperature, current draw) for a robotic fleet and cutting manual data-prep effort for the modeling team.
- Containerized (Docker) an anomaly-detection service and a CV-based defect-detection pipeline, validating both against live production data streams before rollout.
- Applied PCA and feature engineering (scikit-learn, PyTorch) to reduce dimensionality and cut compute/storage overhead on large-scale sensor data.
- Prototyped LLM-based auto-drafting of maintenance reports from anomaly logs, cutting manual reporting time for the operations team.

Software Development Engineer

OMSR Media Pvt Ltd, Gurugram, India | May 2025 – June 2026

- Built end-to-end Python/SQL data pipelines consolidating multi-source engagement data into a centralized store, feeding a Power BI/Tableau dashboard used weekly by the founding team.
- Shipped a recommendation engine (collaborative + content-based filtering) lifting engagement/CTR 15%, and churn-prediction models (logistic regression, XGBoost) cutting churn 8% — both running on lean production data infrastructure.
- Mined user-generated content via NLP (NLTK, spaCy), surfacing sentiment and social-listening insights that shaped content and product strategy.
- Defined KPIs and A/B testing/experimentation frameworks with founders and product for new feature rollouts.

SDE Intern

Stock Tutor Pvt Ltd, Gurugram, India | January 2025 – April 2025

- Built a time-series forecasting pipeline (ARIMA, LSTM) for stock-trend prediction, achieving 78% directional accuracy on backtested data.
- Analyzed historical trading and engagement data to correlate course modules with performance, informing curriculum changes that raised completion rate by 10%.

PROJECTS

mMARS – Multi-Modal AI Research Automation System | Python, LangChain, RAG, AWS, Vector DB

- Built an LLM-driven, RAG-based pipeline for multi-format data extraction, with modular embeddings and vector-based semantic retrieval workflows.
- Designed the underlying storage/retrieval layer around a vector database, structuring embeddings for low-latency semantic lookups at query time.

LLM-Based Language Translation System | Python, Ollama, LangChain

- Developed a real-time translation system with LangChain-based prompt orchestration, optimizing for accuracy, latency, and multilingual context preservation.
- Ran the system on locally hosted models via Ollama, handling environment setup and configuration on Linux.

Duplicate Question Detection | NLP, DistilBERT, Scikit-learn, HuggingFace

- Built a semantic-similarity system (Bag-of-Words + Random Forest, 81.67% accuracy) and fine-tuned DistilBERT (89.89% accuracy) using transformer-based embeddings.

EDUCATION

Bachelor of Technology in Robotics and Artificial Intelligence | 2021 – May 2025

J.C. Bose University of Science and Technology, YMCA, Faridabad, Haryana, India

ADDITIONAL

- Actively building hands-on depth in additional data-storage systems named in target platform roles (MongoDB, ClickHouse, ScyllaDB, MinIO) and Infrastructure-as-Code tooling (Ansible, Terraform) to extend current AWS/PostgreSQL/Docker experience.
- Comfortable working day-to-day in Linux environments for development, containerized testing, and deployment.

ACHIEVEMENTS

- Meta HackerCup 2025 – India Rank 112, Global Rank 716 among 13,000+ participants.
- Codeforces Round 1020 (Div. 3) – All India Rank 466, Global Rank 1783 among 40,000+ contestants.
- Top 20 Finalist, Samsung Solve for Tomorrow (India) – selected nationally for an impactful real-world tech solution.
- 1st Place, Entrepreneurship Summit – J.C. Bose University of Science and Technology (YMCA), Faridabad.
