

DIVYANSHU PANDEY

Software Development Engineer (Full Stack)

Faridabad, Haryana, India | +91-9006188881 | pdivyanshu918@gmail.com | linkedin.com/in/divyanshupandey18 | github.com/divyanshuxpandey

PROFESSIONAL SUMMARY

Full-Stack Developer who builds and deploys AI-driven web applications, connecting Machine Learning models to intuitive user interfaces. Experience across Node.js/GraphQL/REST APIs, SQL (PostgreSQL) and NoSQL data layers, and Server-Side Rendering (SSR) frontend architecture, paired with production LLM integration — RAG, LangChain, vector search — on AWS and Azure cloud infrastructure. Currently ships full-stack features on a live React Native Web + Node.js SaaS platform. B.Tech in Robotics and AI; top-ranked in Meta HackerCup and Codeforces.

TECHNICAL SKILLS

Frontend Development: React.js, Next.js (App Router), React Native / React Native Web, Tailwind CSS, Server-Side Rendering (SSR), responsive user interfaces

State & Data (Frontend): Redux Toolkit, Zustand, React Query, client-side state management

Backend & APIs: Node.js, Express, TypeScript, GraphQL, REST API design, asynchronous programming, microservices, scalable architectures

AI/ML Integration: LLMs, Azure OpenAI, LangChain, LlamaIndex, Retrieval-Augmented Generation (RAG), prompt engineering, ML pipelines, vector search, vector databases & semantic search, HuggingFace, PyTorch, TensorFlow, Machine Learning

Cloud Infrastructure: Azure App Services, Azure Functions, AKS, Azure Portal, Cognitive Services, Azure DevOps CI/CD, AWS (EC2, S3, Lambda, SageMaker), Docker, Kubernetes, GitHub Actions/Jenkins

Database Systems: SQL (PostgreSQL), NoSQL, vector databases (Azure Cosmos DB, Pinecone), data pipelines (Airflow)

Languages & Tools: Python, TypeScript/JavaScript, SQL, Go, C++, Bash, Git

PROFESSIONAL EXPERIENCE

Software Development Engineer I | July 2026 – Present

Apinya Mechatronics Industries Pvt. Ltd. (AIM), Faridabad, Haryana

- Contribute full-stack to **AIM Navigator**, a production telematics/IoT SaaS platform — React Native Web frontend, Node.js/Express + PostgreSQL backend — building APIs that surface real-time fleet data.
- Build predictive maintenance Machine Learning models (XGBoost, LSTM) on multi-sensor time-series data, exposed via backend services and dashboards for stakeholders.
- Prototype an autoencoder anomaly-detection module and a CNN defect-detection pipeline, containerized with Docker for testing against live data streams.
- Set up AWS data pipelines (S3, Lambda, Airflow) into PostgreSQL, and explore GenAI/prompt engineering to auto-draft maintenance reports from anomaly logs.

Software Development Engineer | May 2025 – June 2026

OMSR Media Pvt Ltd, Gurugram, Haryana

- Built a content recommendation system (collaborative + content-based filtering), improving engagement and click-through rate by 15%.
- Deployed churn prediction models (logistic regression, XGBoost) as backend services, powering retention campaigns that cut churn by 8%.
- Built end-to-end Python/SQL data pipelines and REST endpoints consolidating multi-source engagement data into a shared dashboard used weekly by the founding team.
- Partnered with founders and product to define KPIs and design A/B testing frameworks for new feature rollouts.

SDE Intern | January 2025 – April 2025

Stock Tutor Pvt Ltd, Gurugram, Haryana

- Built a stock price trend prediction model (ARIMA, LSTM) with 78% directional accuracy, served via backend APIs for an educational product.
- Analyzed engagement data to identify course modules tied to better performance, informing curriculum changes that raised completion by 10%.

PROJECTS

mMARS – Multi-Modal AI Research Automation System | Python, LLMs, LangChain, RAG, AWS

- Built an LLM-driven pipeline with Retrieval-Augmented Generation for multi-format data extraction; designed modular workflows with prompt orchestration, embeddings, and vector-based semantic retrieval.

PIDV – Person Identification & Verification via ML | Python, OpenCV, YOLOv4, TensorFlow

- Built a computer-vision system combining face detection (Haar Cascade), age/gender estimation, and YOLOv4-tiny object detection to identify individuals and estimate inter-person proximity from live camera feeds for social-distancing and smart-environment use cases.

Duplicate Question Detection | NLP, DistilBERT, Scikit-learn, HuggingFace

- Built a semantic similarity system (Bag-of-Words + Random Forest: 81.67% accuracy; fine-tuned DistilBERT: 89.89% accuracy) using transformer-based embeddings.

EDUCATION

Bachelor of Technology in Robotics and Artificial Intelligence | 2021 – May 2025

J.C. Bose University of Science and Technology, YMCA, Faridabad, Haryana

ACHIEVEMENTS

- Meta HackerCup 2025 – India Rank 112, Global Rank 716 among 13,000+ participants.
- Codeforces Round 1020 (Div. 3) – All India Rank 466, Global Rank 1783 among 40,000+ contestants.
- Top 20 Finalist, Samsung Solve for Tomorrow (India) – selected nationally for an impactful real-world tech solution.
- 1st Place, Entrepreneurship Summit – J.C. Bose University of Science and Technology (YMCA), Faridabad.
